

SIT BACK AND RELAX

Trusted Adhesive Systems by TWEHA – Backed by Local Experts: Your Partners in Bonding
In façade design and construction, confidence is key. Architects rely on aesthetics and durability, structural engineers on performance and calculations, and supervising authorities on safety and compliance. At TWEHA, we understand these expectations. That's why our message to all stakeholders is simple: sitting back and relax. We take care of the bond — literally and professionally.

Proven Systems. Certified Performance.

TWEHA adhesive systems are used in façade projects around the world. Engineered for long-term reliability under all conditions, our products are durable, resistant to vibration and temperature extremes, and certified to the highest European standards. Whether it's initial bonding strength or long-term performance, our systems deliver — even for challenging substrates or demanding environments.

Local Expertise: Our Partners in Bonding

Adhesive technology is only part of the story. For proper application and project support, we rely on our carefully selected network of local distributors — our *Partners in Bonding*. More than just suppliers, these partners are trained by TWEHA to provide on-site expertise and technical guidance throughout every stage of the project.

From specification advice to substrate evaluation, application guidelines, and quality control during construction — our partners speak your language, both technically and geographically. They are close by when it matters most.

Design. Build. Deliver — With Confidence.

Working with TWEHA and its Partners in Bonding means reducing risks, avoiding costly mistakes, and ensuring smooth communication from design to completion. The adhesive does the work. We make sure you can focus on what truly matters: delivery quality. So, sit back. Relax. And trust in the strength of our connection.
