

BY CHOOSING TWEHA AS A PARTNER FOR YOUR BONDING PRODUCTS, YOU CHOOSE FOR THE ENVIRONMENT!

Sustainability is top priority at TWEHA, which aims to achieve an optimal reduction of environment incriminating substances.

For example our water-based surface conditioner: the policy not to choose a similar product as one of the competitive products lies in the fact that these products consists for approx 90% of Toluene. Toluene is the most important part of, for example, thinner, and a component of petrol. It is also used as solvent in tire repair adhesive. Toluene is the active substance in glues chosen by drug users for sniffing.

Toluene is harmful after prolonged exposure to high concentrations, it can cause memory problems. Besides harmful long-term, it is also harmful in the short term.

For that reason, the management of Tweha decided to not include such a product in our program, although processing of our present surface conditioner is more difficult.

Just like to our water-based surface conditioner and the full return of the amount of DBT in our bonding products, we live up to our environmental criteria. Not only for ourselves but for our children too!
