

**EXPERIENCE IS NOT WHAT HAPPENS TO A BUILDER.
IT IS WHAT A BUILDER DOES WITH WHAT HAPPENS TO HIM.**

TWEHA has been in the facade industry for almost 50 years. We not only supply unique systems for facade panel bonding, but also have a technical background as an engineering firm. The latter enables us to provide expert advice in facade design and engineering.

Our TWEHA adhesive products are strong, durable and do not contain hazardous primers. This has the following advantages:

- Application is significantly simplified.
- There is one less application run, which reduces the risk of errors.
- You are not bound by a time limit when applying.
- Less chance of environmental and health hazards.
- The adhesive system can be processed at low temperatures.

Because we only operate in the field of facade cladding, we have built up a wealth of experience and specific know-how in this field. You can now find our solutions on many thousands of buildings in more than 50 countries around the world.
