

GET INTO THE FUTURE WITH TWEHA!

With your choice for TWEHA you have chosen for over 40 years' experience in cladding, quality, knowledge and skills.

For TWEHA it is important that everybody who will come in contact with the process of bonded cladding has access to the right knowledge and skills. Only application in a right manner with the appropriate adhesive system ensures a safe and sustainable result.

It is necessary the applicator who processes the adhesive has sufficient knowledge of the adhesive, the conditions under which it can be applied, the quantity of adhesive needed, the "open-time" of the adhesive, etc. This knowledge contributes to an adhesive joint which satisfies the required expectations and requirements.

As a valuable asset to the quality of our adhesive systems we want to pass on our knowledge on the usage of the adhesive systems, in order to maintain the highest standards. Of course, on behalf of the application process, guidelines and instructional videos are available.

TWEHA however, to enlarge the knowledge on the bonding of façade panels, wants to keep a proper disposal of its adhesive systems at the highest level.

In the next monthly newsletter you will find the first subjects that are important for a safe and durable bonded cladding.

TWEHA, 2020
