

OUR LISTING OF SEVERAL SUBSTRATES TESTED AND APPROVED THAT CAN UTILIZE THE UNIQUE TWEHA BONDING SYSTEMS

Our clients using our bonding systems are expected to be able to consistently produce an assembly without differences in the quality of the bonding products used. However, there are (too) many different adhesive systems available for you.

Unlike all colleagues TWEHA focusses to the bonding of cladding only. Functioning as international facade consultant for years, benefits our experience.

Making a choice, you must be aware of the specific adhesion properties that requires your application. The formulation of the adhesive system you want to use must be adapted to the surface of the substrate to be bonded.

You must be aware about the requirements for your specific application in relation with the quality of the bonding system you want to use.

A drop in performance due to using a sub-standard adhesive must be avoid.

The formulation of the bonding system you want to use must be adapted to the specific substrate being adhered.

Please look at [our listing of several substrates tested and approved](#) that can utilize the unique Tweha® brand bonding systems and the corresponding benefits
