

MASONRY BRICK ERA IS PASSÉ

The days when every building was built with masonry bricks stacked on top of each other are far behind us.

In 2022, a company's cladding emanates what it stands for. It shows what to expect from the organization. With a thousand-and-one different companies, there are also countless types of cladding. From composites, metals, ceramics to natural stone and from phenolic panels, fibre cement panels to glass. And all these materials need to be durably attached to the building structure behind.

TWEHA is one of the world's leading knowledge partners in the field of fixing adhesives for ventilated facade structures. Mario van Leeuwen has a background as a structural expert and has been in the business for almost 45 years. Since 1999, he has been in charge of TWEHA, knowledge expert in the field of cladding panel bonding. Thanks to Mario's many years of experience in the industry, he knows better than anyone how the different types of cladding function and what advantages adhesives offer over mechanical fastening.

Are you curious about the advantages of gluing or would you like to know what we can do for you or your customers? Then take a look at our website or contact us.
