

SAFETY THROUGH EXPERTISE, INNOVATION, EXPERIENCE AND TRENDS.

Our knowledge box is a platform entirely dedicated to the cladding industry. It is the place where we share exciting content about expertise, innovations, technologies, and trends in the cladding industry. We post the latest developments and facts there, not only about our adhesives, but about everything we encounter in the field of bonded cladding.

The TWEHA knowledge box puts you in the front row when it comes to technical innovations. You'll have access to technology tips and important information and gain insight into the projects we've completed worldwide over fifty years, the customers we work with and how we handle technical support and technology. You will discover that we are leading the way in the bonded cladding industry and that the way cladding technology is applied is changing.

An important topic you'll read about in the knowledge box is safety. Absolute safety cannot be guaranteed and therefore should not be pretended. Safety risks must be reduced to what is reasonably possible. Construction and engineering provisions make an important contribution to this. Inevitably, there is always a residual risk. There is no such thing as a risk-free society. In other words: society must strive to prevent calamities but must be aware that a calamity can occur despite all efforts. You can read more about this in the Safety chapter in the knowledge box.
