

WORLDWIDE TESTS AND TRIALS

We value the confidence in perfect operation of our products. This is why we have had our adhesive systems evaluated by various independent, external experts for many years. Worldwide test programs confirm time and again the outstanding quality of TWEHA adhesive systems.

In addition to the tests, we conduct ourselves on an ongoing basis, tests according to national and international guidelines ensure perfect adhesion of our products to a variety of cladding materials and substrates. These results are provided as a report. We use the results obtained to make recommendations on surface treatment: for example, the need of cleaning and surface improvement of the substrates used.

The durable adhesion of TWEHA adhesive systems has now been tested and approved on more than 100 cladding materials and substrates.

Curious about the results? You can find them here (<https://tweha.com/tested-approved-substrates/>).
