

‘RTFM’ – WHY IS A PROCESSING DIRECTIVE SO IMPORTANT?

Application and execution errors are often the cause of problems with glued façade panels. This is not due to the materials used, the underlying cause of most of these cases can always be traced to user errors. Incorrect use, incorrect circumstances or incorrect detailing of the façade construction, incorrect execution or unfamiliarity with the adhesive systems are just a few examples that are usually the basis and therefore the real cause.

Despite the fact that nobody likes to read an instruction manual, TWEHA emphasizes its processing guidelines. It must be made as clear as possible to the user how to properly fit the façade panels.

TWEHA is convinced that a processing directive is essential for the correct processing and quality of a bond. TWEHA also feels obliged to supply at least a paper manual with their adhesives.

In the age of digitization, modern media must be used to make it as simple as possible for users to properly apply the TWEHA adhesive system. Hence the request to hand out the enclosed processing guidelines to your employees and of course you are free to make them available digitally on, for example, your website.
