

REQUEST THE TESTED AND APPROVED REPORT

The list of tested and approved materials grows monthly. More than 250 types! Recently, we also tested Delfone ceramics, Neolith with a fiberglass backing, and Dekton by Cosentino for our Partner in Bonding in New Zealand. Additionally, test procedures for Florim ceramics, Pulsar ceramics, and Flosa ceramics have been initiated.

Please have a look at our survey of tested and approved cladding materials to be bonded on behalf of ventilated facades.

Tests are an essential part of the TWEHA concept. Our bonding systems are subjected to an intensive internal test program with conditions much heavier than normal use. If you have any questions regarding the approved list, please contact our helpdesk.
