

## **SUSTAINABILITY AND ENVIRONMENT**

At TWEHA, we feel very strongly about the environment and safety. TWEHA has made a commitment to apply the maximum care and attention to human life and environment regulations in all activities carried out within the company. We aim to help our customers minimize any impact on the environment. How do we do this?

- By developing products that comply with the wishes of the customer regarding the social importance and the environment.
- By developing sustainable technologies that cause as little impact on the environment as possible.
- By being continuously innovative.

### **Ecological footprint.**

TWEHA makes every effort to provide customers with 'green' products that can be easily recycled and that are environmentally friendly. These 'green' products are in line with both legislation and the continuously developing market. In addition, TWEHA places great importance on the use of biodegradable, sustainable raw materials wherever possible in the production and development processes.

TWEHA has made a commitment to educate customers and potential users about TWEHA's Bonding Systems to minimize our own and our customers' environmental impact and to work in a safe and sustainable manner.

### **Waste processing and safety**

The internal and external security procedures are applicable to all acts and apply for all levels of the organization. The safety system for product handling is fully integrated into the order system.

Waste streams are systematically separated and disposed of through approved companies. Emissions of hazardous substances are well below the permissible levels.

Employees who may encounter hazardous substances are well trained. Our procedures for protecting people and the environment also apply to the storage and transport of hazardous substances.
